Overview of user behaviors

What do users see when they are in your website?

This chart shows which website pages get the most views. [High page views = popular content, Low page views = less interest.]

If a page is very popular, add CTAs (e.g., "Contact Us" or "Subscribe"), promote related content, and optimize for conversions; If a page gets few views, improve its SEO and share it on social media.

Your audience at a glance

This chart tracks how many first-time visitors your website gets each day. [Flatline at zero = no new visitors recorded.]

If new users remain at zero, check if GA4 tracking is set up correctly, ensure Google Tag Manager (GTM) is firing, and improve marketing efforts (social media, SEO, ads).

If new users suddenly increase, identify traffic sources (ads, social media, referral links) and optimize the user journey for retention.

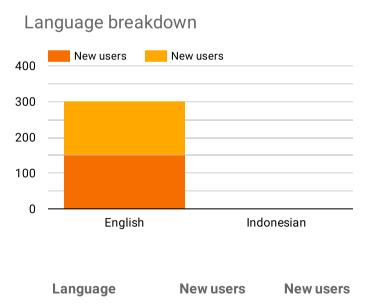

Event Name by Sessions (User Engagement)
This chart tracks the types of user interactions on the website
[Larger segments = more engagement with that type of event.]

If page views are high but clicks are low, make links more visible, and add interactive elements.

If first visits are low but session starts are high, most visitors are returning users—consider strategies to attract visitors (SEO, ads).

Let's learn a bit more about your users!

	Language	New users	New users
1.	English	151	151
2.	Indonesian	1	1

1-2/2 <

This chart tracks the primary languages of website visitors. [More diversity = potential need for multilingual support.]

If many non-English speakers visit, consider translating content or adding a language switcher.

Country breakdown

	Continent	New users	New users
1.	Americas	137	137
2.	(not set)	12	12
3.	Europe	2	2
4.	Asia	1	1
		1 -	4/4 < >

This chart tracks where your website visitors come from.
[Higher numbers in a region = strong interest from that audience.]

If traffic from certain regions is high, target ads or create localized content.

What device are people using?

83.6%

• desktop • mobile

This chart tracks whether users visit from desktop or mobile. [More mobile traffic = need for a mobile-friendly site.]

If mobile visits are low, check if the site is mobile-responsive and improve mobile UX.
